# Auction for Grid Losses successfully performed on the 16<sup>th</sup> of November

ELES Ltd. in cooperation with BSP Regional Energy Exchange LL C conducted an auction for the purchase of energy to cover losses on the transmission system in the years 2017, 2018 and 2019. The subjects of the auction were 11MW Base Load product for 2017, 10MW Base Load product for 2018 and 10 MW Base Load product for 2019.

### How would you comment the auction results?

The results are in line with expectations.

### What would be your message to the current and future GLOS auction members?

As a public company we are highly interested in creating a competitive environment that will attract many bidders. Due to the lack of transparent long-term price signal for Slovenian market, we believe that high number of bidders is a key to forming a competitive price. A step in this direction has been made last year, as we started a cooperation with BSP. This cooperation has enabled us the use of modern user-friendly solutions (trading application). For the future we would be interested in getting some feedback from members who applied to auction, and especially from those who did not what would have to be improved in the tendering procedures, which are the obstacles that turned them away from applying to auction etc...

## Response from ELES after the conclusion of GLOS auction

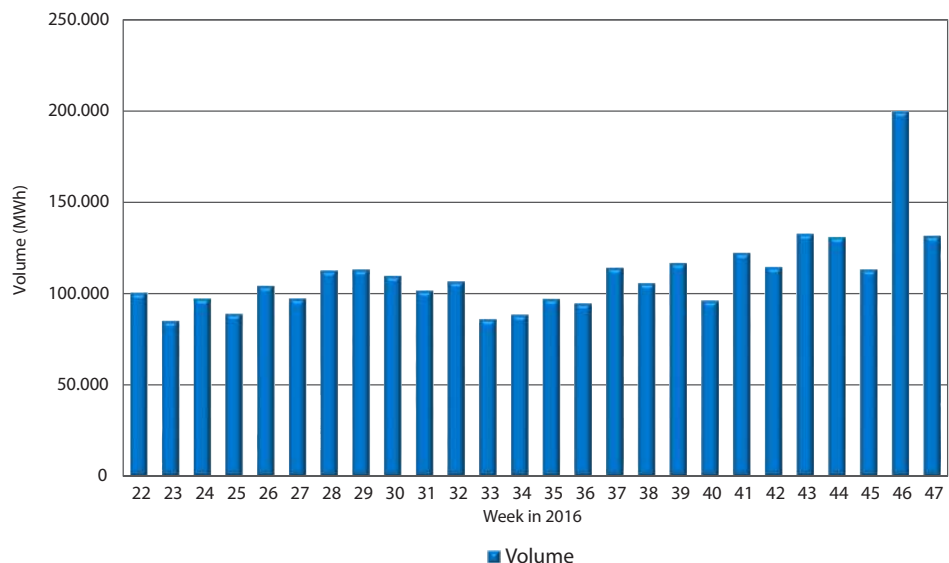

### How are you satisfied with members responsiveness to GLOS auction 2016?

We are satisfied with responsiveness from members. Especially due to a fact that new bidders turn up each year and they do not fall behind the local bidders in terms of placing competitive offers.

# New daily & weekly volume record on BSP

BSP Southpool reached new daily Day Ahead trading volume record for delivery day 8<sup>th</sup> of November, when 35.433 MWh were traded. The second week in November with average daily volume of around 28.600 MWh and total volume of above 200.000 MWh, represents a significant rise in trading volume. 2<sup>nd</sup> week in November reached 77% higher weekly volume than average weekly volume in 2016!
