Corrective Measures “Price Tick Size (PTS)” adjustment: status update of implementation in SIDC

Further to the previous [communication on the steps related to the preparation and activation of the Corrective Measures](#) in the Single Intraday Coupling (SIDC), Nominated Electricity Market Operators (NEMOs) would like to provide a further status update on one of the measures outlined under assessment – adjustment of price tick size (PTS).

PTS will not be changed in XBID as of 1st October 2026 and will stay at its ordinary level of 0.01 EUR/MWh. Nevertheless, the adjustment of PTS is approved as a Corrective Measure and remains available to be potentially activated subject to an MCSC decision to address performance issues, experienced in production in the SIDC-XBID market coupling operations, consistently with the Algorithm Methodology.

The process for activating a PTS change (including latency thresholds, notice to members and duration of activation, amongst others) is still under definition and will be communicated at a later stage.

About All NEMO Committee:

The All NEMO Committee facilitates the cooperation among NEMOs for all common European tasks necessary for the efficient and secure design, implementation and operation of single day-ahead and intraday coupling. The All NEMO Committee is formed by the appointed representatives of each NEMO.

For additional information about All NEMO Committee go to:
